

Create a simple React app inside App.js that contains 3 components:

1. Header – displays a title like “Welcome to React!”
2. FunFact – displays a fun fact:
“Fun fact: A developer once fixed a bug by taking a nap. True story!”
3. Footer – displays a simple footer like “© 2025 All rights reserved.”

All components should be function components, written in the same file.

Feel free to change the texts or add simple inline styling.
