

Product Details Page:

- Add a new route in the app for the **ProductDetails** page:

```
<Route path="/products/:id" element={<ProductDetails />} />
```

- Create a ProductDetails page component
- When you click on any product in the product list, it should navigate to that product's details page
- Fetch the product details from this API endpoint:

<https://fakestoreapi.com/products/{id}>

(where {id} is the product's ID you clicked on)

Hint: Use **useParams** from React Router to get the product id from the URL.
