

Task: Pokémon Lookup Page

Goal:

Build a simple web page that lets users enter a Pokémon name and fetch its data from this API:

<https://pokeapi.co/api/v2/pokemon/{name}>

Requirements:

- Text input + button to search by name
- Fetch and display:
 - Name (capitalized)
 - ID
 - Height
 - Weight
 - Types
 - Sprite image
- Show an error message if the Pokémon is not found
- **Bonus:** Add a loading indicator while fetching
