More practice on ==Events==:

1.Button Click Event

Write a JavaScript program that creates a button and add a click event listener to log a message when it's clicked.

2.Mouse Enter Background Change

Write a JavaScript function that changes the background color of an element when a mouse enters it.

3.Prevent Default Behavior

Write a JavaScript program that prevents the default behavior of a form submission and logs the input values to the console.

3. Dropdown Menu Toggle

Write a JavaScript program to create a dropdown menu that shows and hides its options when clicked
